DETAILED ACTION

Claim Objections

1. Claims 4-7 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend on another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 4-7 have not been further treated on the merits.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.

Art Unit: 1713

2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Resendes, U.S. Patent No. 6,706,804

(hereinafter "Resendes") in combination with Cruse et al., U.S. Patent No. 6,608,125 (hereinafter "Cruse"). Resendes teaches a filled halobuyl elastomer comprising a bromobutyl elastomer, silica and a silazane compound. See Resendes, Abstract; col. 1, line 49 through col. 2, line 56. Resendes differs from the present invention in that the present invention requires a protected thiol modifier. Cruse teaches in analogous art a block mecaptosilane-coupling agents for filled rubbers. See Cruse, Abstract; col. 2, lines 22-53. In view of Cruse, one having an ordinary skill in the art would be motivated to modify Resendes by using an block mecaptosilane-coupling agents in the filled rubber composition. Such modification would be obvious because one would expect that the use of a filled rubber composition as taught by Resendes to be similarly useful and applicable to the filled rubber composition taught in Cruse. The two references are not only both directed to rubber

compositions but are both directed to filled rubber composition with silicon-based additives.
